the concept of fuzzy logic refers to a specific subset of many valued logic in this line of reasoning the truth value of a variable can be any real integer including any fraction that is between 0 and 1 this applies to all fractions as well it achieves this by regulating the concept of partial truth in which the truth value may switch between being entirely true and entirely false at any given moment this objective may be accomplished by making use of the tool for managing concepts in contrast the truth values of variables in boolean logic can never be anything other than the integer values 0 or 1 as there are only two alternatives that even have a remote chance of occurring this is because there are only two options that are even remotely imaginable it is common practice to consider the fuzzy set theory which was created in 1965 by the iranian azerbaijani mathematician lotfi zadeh to be the basis for fuzzy logic however since the 1920s scholars have been investigating fuzzy logic which was also known as infinite valued logic at the time most notably lukasiewicz and tarski were the researchers that began this line of inquiry this particular investigation didn't wrap up until the 1960s but it began in the 1920s the idea of fuzzy logic is based on the fact that decision makers frequently rely on hazy and non numerical information in other words this is the origin of fuzzy logic the mathematical methods of fuzzy modeling and fuzzy set creation both of which are used to describe ambiguous and imprecise information are where the name fuzzy first appeared these models are capable of recognizing representing manipulating understanding and using facts and information that are

fundamentally hazy and ambiguous in nature fuzzy logic has been effectively applied in a variety of applications from control theory to artificial intelligence conventional patterns of thinking can only ever lead to conclusions that are either correct or incorrect however there are other statements that may elicit a range of responses such as the answers you could get if you asked a group of individuals to name a color one that invites people to name a meal is another 1 p a ge illustration of this kind of proposal in situations like this it is the application of reasoning based on incomplete or inaccurate information that leads to the finding of the truth this argument entails plotting the sampled responses on a spectrum although degrees of truth and probabilities both range from 0 to 1 fuzzy logic employs degrees of truth as a mathematical model of ambiguity whereas probability is a mathematical model of ignorance despite the fact that they may initially appear to be the same although they could at first glance appear to be the same because both probability and degrees of truth range from 0 to 1 this is only because they do
